

Ocean Currents

Water moves within the oceans in streams called currents. Using colored pencils, color the arrows blue for cold currents or red for warm currents. When you are finished, cut out the ocean current map and glue in your notebook. Answer the questions that follow and glue them in your notebook too.

Ocean Currents Questions

What is the name of the current that flows south along the west coast of the USA?

Is this current warm or cold?

In what direction do cold currents generally flow in the northern hemisphere?

If a raft drifted on the Gulf Stream, beginning in Florida, where might it reach land?

How would the climate of Florida be affected if the Gulf Stream were to reverse direction?

Why is the climate of England more moderate than the climate of other places at the same latitude?
